

No Two Drain Baskets Are Created Equal

The  Basket

As the basket fills up, water flows through the sides!

What the others are selling

VS.

As the basket fills up, there is nowhere for water to flow and the floor sinks will overflow very quickly

New Style

- ✓ All the sides and the bottom have drainage slots to allow for maximum water flow.
- ✓ Features thin drainage slots that can catch finer products such as rice
- ✓ High strength, durable construction made with high temp plastic resin - resistant to hot water.
- ✓ Available in multiple sizes, round, custom sizes and colors available.
- ✓ Available with easy access handle

Old Style

- ✗ No drainage slots on SIDES. Solid waste will quickly result in restricted water flow.
- ✗ Large round holes allow more solids into your drains, making them less effective. They will not capture rice.
- ✗ Older materials will weaken when exposed to hot water. Thinner weaker walls.
- ✗ No handle available or lip to pick up with

Basket with Handle

- Handle protect employees from exposure to broken glass and all the solid waste in the basket
- Prevents tipping and spillage when emptying basket
- Extended handle available for hard to reach locations
